# Protect valuable and confidential information. Capture, archive, and audit all imageRUNNER ADVANCE* device activities.

**imageWARE**
**Secure Audit Manager**

**Capture data and user information for jobs processed by imageRUNNER ADVANCE devices.** imageWARE Secure Audit Manager Express coupled with uniFLOW is an information security software solution for document distribution oversight. This solution carves a new concept in the information security industry. It's the first product to provide capture, archive, notification, and audit capabilities of Canon device activities such as print, scan, fax, and copy.

imageWARE Secure Audit Manager Express helps deter ill-intentioned workers from leaking important and valuable information sent to and from imageRUNNER ADVANCE systems. In the event that such leakage does occur, crucial information, such as who, what, where, and when this event occurred, can be quickly retrieved.

imageWARE Secure Audit Manager Express captures job attribute information such as time, date, user, destination, and text data. After this information is captured, it's stored and can be readily searched using either a full text search or attribute search. With this solution, companies and organizations can reduce risks and liabilities associated with the leakage of important and confidential information.

- Keyword Detection

## System Overview

### Benefits

- **Reduces Information Security Breaches.** With its ability to prevent prints, copies, scans, and faxes, private information remains private. And because users are required to authenticate at the imageRUNNER ADVANCE device before performing any task, outside users are prevented from breaching the company's environment.

- **Deters Valuable Information Leakage.** By recording the job information and the actual image of all jobs performed on the imageRUNNER ADVANCE device—and letting that functionality be known to all users—valuable information is less likely to leak outside the company. This helps to decrease damages caused by unwanted data leaks.

- **Offers A Complete Content Audit Trail**. Requiring authentication and utilizing OCR allows all job attribute information—such as who sent it, when it was sent, the text in the document, and the actual document image— to be recorded, providing a complete and detailed audit trail of all jobs.

- **Facilitates Compliance.** Having a complete audit trail of content and attribute information of imageRUNNER ADVANCE system activities helps promote regulatory compliance as well as compliance with industry standards and corporate regulations.

- **Monitors And Alerts.** The ability to notify a designated administrator(s) when a specific keyword is printed, copied, scanned, or faxed will make monitoring crucial information leaks simpler and timely.

**Note:** Powered by MEAP®: imageWARE Secure Audit Manager Express uses Canon's MEAP technology.
The imageWARE Secure Audit Manager Express MEAP component, known as the iR Agent, captures and sends data to the database.

# Features

**Centralized management.** The imageWARE Secure Audit Manager Express centralized Web Management Console makes the solution easy and cost-efficient to operate. From one central location, system-wide changes can be applied.

**Optical Character Recognition (OCR).** All recorded jobs can be processed by OCR allowing auditors to perform the full text search.

**Job settings.** Specify types of jobs to be recorded by any combination of copy, print, send fax, receive fax, and scan/send in three different time periods for any device(s).

## Express Server

### Hardware Requirements

| | |
|---|---|
| CPU: | Intel Xeon 3400s (4 cores) equivalent or higher (recommended) |
| Hard Disk Space: | File system: NTFS (mandatory) |
| | 20 GB or more disk space in the drive in which the system folder exists |
| Memory: | 4 GB or more (recommended) |

### Software Requirements

Only the operating systems listed below are supported.

| | |
|---|---|
| Operating Systems: | Windows® Server 2008 R2 (Standard, Enterprise) SP1 |
| | Windows Server 2012 (Standard) |
| | *Note: 32-bit edition operating systems are not supported.* |
| Supported Virtual Environments | VMware vSphere Hypervisor (ESXi) 4.1/5.1 |
| | Hyper-V2.0 availble in Windows Server 2008 R2 |
| | Hyper-V in Windows Server 2012 |
| | *Note: The operation in Server Core is not guaranteed.* |
| Components: | Components (on Windows Server 2008 R2): |
| | NET Framework 4.0 Full |
| | NET Framework 4.0 Full Language Pack |
| | ASP.NET 4.0 |
| | |
| | Components (on Windows Server 2012): |
| | .NET Framework 4.5 |
| | ASP.NET 4.5 |
| Web Server: | Internet Information Services 7.5 (on Windows Server 2008 R2) |
| | Internet Information Services 8.0 (on Windows Server 2012) |
| | *NOTE: When you reinstall Internet Information Services (IIS) on Windows Server 2008 R2 after installing Express Server, you need to reinstall .NET Framework 4.0 and Express Server.* |
| Web Browser: | Internet Explorer 7.0/8.0/9.0/10.0 |
| Operating System Supporting the Web Browser | Windows XP Professional SP3 |
| | Windows Vista (Business, Enterprise) SP2 |
| | Windows 7 (Professional, Enterprise) SP1 |
| | Windows 7 (Professional, Enterprise) SP1 x64 Edition |
| | Windows 8 (Pro, Enterprise) |
| | Windows 8 (Pro, Enterprise) x64 Edition |
| | Windows Server 2008 R2 (Standard, Enterprise) SP1 x64 Edition |
| | Windows Server 2012 (Standard) |
| | *NOTE: Operation in XP mode in Windows 7 is not guaranteed.* |
