

HP Roam for Business

Print redefined for the mobile workstyle

Submit print jobs while on the go from any device, and release at any of your HP Roam-enabled office printers, simply and securely

Across businesses large and small, the mobile workstyle is transforming the way we work. Our work is now collaborative and adaptive, but printing has been slow to adjust to this change.

Until now, it's been difficult for users to print when away from their desks, while working from other locations, or from a mobile device.

Easily enable secure mobile printing for every user

HP Roam for Business is a universal business printing experience that reshapes how innovative organizations print. You can replace traditional, printer-specific drivers with an intuitive print experience that is simple to use, is scalable, and provides a natural experience across desktop and mobile devices. Customer and company data are protected by advanced security features such as encryption, authentication, and integration with Office 365 and HP ID.

Mobile professionals can now submit print jobs while on the go from any device, and release at any Roam-enabled office printer—simply and securely. Print jobs are submitted to the cloud as users create or consume content.

Prints can then be securely retrieved from any enabled device in the office or home office. There's no need to worry about device-to-printer compatibility or connectivity.

1 Print to personal print queue

Users submit print jobs from any personal computer or mobile device, selecting HP Roam as the destination rather than a specific printer. The print job uploads to their personal print queue in the HP Roam cloud.

2 Automatically discover printers

When a user's mobile device is close to an HP enabled office printer and there are print jobs in their personal print queue, HP Roam delivers a notification that prints can be released from the cloud queue.

3 Authenticate and secure release

Once at the printer, users can use their mobile device to authenticate and release all or selected print jobs in their queue. For some printer models, additional on-device authentication options are available too.

Notifications make print release a breeze

When you are in range, BLE technology enables fast autodiscovery of printers, along with user notifications.

Deploy a secure, scalable, cloud print solution

As a subscription-based service, HP Roam for Business is easy for IT to manage. Fleet-wide deployment tools help you get up and running quickly. Integration with Office 365 and HP ID helps you set up user accounts and can streamline authentication and back-end print tracking and reporting. HP Roam Bluetooth® beacon technology (BLE) is included in select HP printers and MFPs and can be enabled for existing devices via an optional accessory.

Deliver a single, universal print experience

Managing printing for users on the go—while trying to maintain consistency and keep your environment secure—can be a real headache. HP Roam for Business replaces printer-specific drivers, allowing users to print from any personal computer or mobile device.

You enjoy the simplicity of a single, cloud-based print solution and better control over your print environment. And you can help save costs due to fewer wasted print jobs.
